

- **Snow Melting for under Driveways:**

The days are shorter and the mornings are colder. The last thing you want to do is get up even earlier every morning to shovel snow from your driveways. With both mat and cable applications available, WarmlyYours snow melting systems install directly in concrete, asphalt or in mortar beneath pavers, making back-breaking shoveling a thing of the past.

The paving material absorbs heat from the snow melting heating elements, melting the ice and snow. There is no need for expensive de-icing chemicals that can reduce the life of your driveway. With color-coded wires for easy and safe installation, our heated mats provide an evenly spaced 50 watts per square foot, to ensure optimal performance in driveways, walkways, and stairways. Offered in 120V and 240V configurations, they are ideal for use in residential and commercial applications.

Is your driveway oddly shaped? Our customizable cable product can accommodate even the most unusually shaped heated driveways, and fit any budget. Designed for maximum flexibility, our cables are available in lengths ranging from 43' to 428'. Like our mats, each cable features ¼" twin-conductor series resistance cable for energy efficient operations. Rated for use on indoor and outdoor slab heating applications even in the harshest of northern climates, the cables generate 12 watts per lineal foot for reliable melting efficiency, getting you on the road a lot quicker.

WarmlyYours snow melting experts can design a custom mat or cable outdoor heating system that is perfect for your project right down to the controls. There are a variety of snow melting controls available, from very simple manual devices, to more sophisticated sensors that can automatically detect when the snow is falling. These can be positioned in the air, or be embedded in the system itself for an automated service. Snow-melting controls are hooked up to an electrical circuit by a professional electrician.

We offer a variety of controls to meet your needs:

Premium-Aerial Control: Offers easy installation for use with asphalt, concrete or pavers.

Economy-Slab Control: Offers the fastest response time with the sensor in direct contact with the asphalt or concrete to be heated.

Manual Timer Control: Offers manual control with the owner determining the hours of operation.

Our industry-approved driveway heating system guarantees quality, and our technical support staff are available 24/7 to answer any queries. All WarmlyYours snow melting mats and cables are CSA Certified for use in Canadian and US markets and backed by a 10-year limited warranty. Get an instant online quote today!

- **Patio Page**

Many of us spend thousands of dollars on patio extensions, only to use them for a few months every year. Today's patios are designed to be works of art as well as luxurious extensions of your home. With water features, outdoor kitchens, fireplaces, and beautifully furnished seating areas, these outdoor living spaces are quickly becoming hubs for stylish, casual living. WarmlyYours offers patio heating solutions to make the space more than just a part-time room. There is no need to worry about de-frosting, and you can even extend your outdoor entertaining season with a snow-free patio.

Heated patios increase your home's value and extends the life of your outdoor entertainment season, enabling you to better capitalize on your investment. Our non-chemical approach to patio warming protects your decorative features, such as concrete effects. Whether you invest in a concrete, paver, or stone patio, you'll want to enjoy it with family and friends as much as you can - all year around. WarmlyYours snow melting mats are easy to install and our experts can design your system to provide partial or full coverage depending on your needs and budget.

We recommend that the product is installed by a qualified person, in accordance with WarmlyYours installation guidelines, but we also provide a comprehensive color-coding system and manual for those that are able to lay their own equipment. Our heated mats provide an evenly spaced 50 watts per square foot, to ensure optimal performance both indoors and outdoors in residential or commercial properties. Each mat features a ¼" (6mm) diameter twin-conductor series resistance constant wattage cable spaced 3" (8cm) apart.

We can even recommend an outdoor heating system for an odd shaped patio using our snow melting cable product, which is fully pliable to fit around your design. With a range of lengths and voltage configurations, we are able to provide customized solutions that are also energy efficient thanks to twin-conductor heating cables. Each cable features a ¼" (6mm) twin-conductor series resistance cable for energy efficient operations and generates 12 watts per lineal foot (39 watts per lineal meter) for dependable and efficient snow melt performance. Our high temperature rated outdoor heating equipment can be remotely controlled, either through a manual interface, or a programmable sensor.

Our snow melting systems are covered by WarmlyYours's 10 year limited warranty, and all controls are backed by a two year limited warranty, covering defects in workmanship and materials. Our technical help staff are on hand around the clock to answer any questions, and we offer instant quotes online.

Don't let ice or snow confine you to one part of the house. With a patio heating system from WarmlyYours your heated patio can be the outdoor oasis you created it to be...even when the weather is not as inviting.

- **Walkway & Stairs Page**

First impressions are everything, and when it comes to your home, stairs and walkways are the first place your guests will visit.

You devote so much time to making your home a welcoming and comfortable destination for your friends and family - why not extend that same reception to the exterior of your home with outdoor radiant heating? A snow covered walkway can be slippery and dangerous for family, friends, and business callers. Black ice forms easily on these surfaces, posing great hazards and even legal threat. Choose an easy to install snow melting system from WarmlyYours. Both our mats and cables are suitable options for creating heated walkways.

Navigating an icy stairway can be scary. It is the most dangerous part of the house if snow falls, as the surface area is ideal for slipping in these circumstances. A lack of stairway heating in these icy conditions can cause fatal accidents at home or at the office. A WarmlyYours snow melting cable system is flexible, durable, and environmentally sound, removing the stress and caution of navigating outdoor stairways at this time of year. When the snow begins to fall, your heated stairs will clear ice and snow allowing you to come and go freely.

Our flexible cable systems are suitable for a variety of surfaces, including asphalt, concrete, and mortar under pavers. Available in a variety of lengths and voltage configurations, the high temperature rated cable can be used alone or in conjunction with our heated mats to provide you with the peace of mind in knowing

that you are providing safe walkway heating. Both materials are flexible enough so that cutting it to mold to awkward and confined spaces is not a problem.

The energy efficient twin-conductor heating cables found in both products use up to 50 watts per square foot, and are constructed with a high temperature rated cable for extra protection during installation. Additionally, they can be controlled through manual operation, a timer, or an independent sensor.

WarmlyYours wants you to have a safe winter season. Call now to learn more about our outdoor heating systems, or get a quote online. We'll recommend a system that is the exact fit for your home or business and comes with our signature custom installation plan. Our customer service team is available round the clock to ensure complete service satisfaction. All our equipment is CSA Certified for outdoor use in Canada and US

- **Portable Snow Melting Products**

Snowfall and ice are unpredictable – it is not always possible to lay down a snow melting system that will catch every dangerous area. WarmlyYours has developed a range of portable solutions to ensure that your home and property stays completely frost-free all winter long.

Imagine stepping out of your front door on a cold, snowy day and your entryway is free and clear of ice and snow. With HeatTrak's heated carpet top mat, shoveling or salting your entryway is a thing of the past. Turn the mat on as snow starts to fall to evaporate snowflakes instantly, helping to prevent dangerous ice and snow accumulation.

Sandwiched between two protective pieces of non-slip rubber, this durable 2x3' mat is fitted with a Ground Fault Circuit Interrupter, protecting the heating element from leaks. This stylish gray item is designed to withstand even the harshest winter, so it can stay outside throughout the entire season – they can even be secured to the ground.

With the HeatTrak walkway mat, there is no more fear of slipping, falling and injuring yourself on the sidewalk because of dangerous ice or snow accumulation. You can leave your home or office with the peace of mind of knowing that your passage way is clear, and safe for all users.

Available in a variety of sizes and voltages, the device is suitable for any walkway. Just place the mat over an existing sidewalk surface, plug it in, and turn it on – ideally just before snowfall. The durable non-slip material can be fastened to the walkway, and left out for the entire season.

Temporary stairway mats are also available, avoiding dangerous situations resulting from black ice on already slippery surfaces. HeatTrak's heated modular stairway mats are designed to accommodate stairways with as many as 9 steps.

Each individual stairway mat is 11" x 31" of reinforced UV stabilized natural rubber, and you can customize your order for the number of stairway mats that you actually need. The stairway mat set is attached to a power supply cord and the individual mats are connected together by 18" long connector cables. Just plug into a 120 volt outlet to operate. Each stairway mat also comes with grommet holes to secure the mat to the step.

As always, our products are rated and included in our two year warranty. Help desk staff is available around the clock for any queries. These items are not eligible for a trade discount.
